UF Health Department of Dermatology is evaluating an investigational topical medication that is being developed for future treatment of atopic dermatitis

Participants will be seen by a dermatologist to determine if the enrollment criteria is met. Participants will have 2 blood draws, 2 optional skin biopsies and will be asked to apply an investigational topical medication to an indicated area once a day for up to 28 days and to attend up to 4 study visits over the 6 week study period at the UF Health Department of Dermatology at Springhill.

We are looking for:

- Patients with moderate to severe atopic dermatitis, “Eczema”
- 18-65 years old, male or female
- For females, not pregnant or lactating and willing to agree to birth control
- No known allergy to tetracycline, lidocaine, epinephrine, or Novocain or allergy to tape and/or other adhesive materials

Compensation will be provided for participants that complete study related visits.
